## NOTE

- This TV has only limited PC compatibility, correct operation can only be guaranteed if the video card conforms exactly to the VESA 60Hz standard. Any variations from this standard will result in picture distortions.

## Cautions regarding use in high and low temperature environments

- When the unit is used in a low temperature space (e.g. room, office), the picture may leave trails or appear slightly delayed. This is not a malfunction, and the unit will recover when the temperature returns to normal.
  - Do not leave the unit in a hot or cold location. Also, do not leave the unit in a location exposed to direct sunlight or near a heater, as this may cause the cabinet to deform and the LCD panel to malfunction.
- Storage temperature: -20°C to +60°C.

## IMPORTANT SERVICE SAFETY PRECAUTION

Service work should be performed only by qualified service technicians who are thoroughly familiar with all safety checks and the servicing guidelines which follow:

### WARNING

1. For continued safety, no modification of any circuit should be attempted.
2. Disconnect AC power before servicing.

**CAUTION:** FOR CONTINUED PROTECTION AGAINST A RISK OF FIRE REPLACE ONLY WITH SAME TYPE  
F701 (4A / 250 V)

### BEFORE RETURNING THE RECEIVER (Fire & Shock Hazard)

**Before returning the receiver to the user, perform the following safety checks:**

1. Inspect all lead dress to make certain that leads are not pinched, and check that hardware is not lodged between the chassis and other metal parts in the receiver.
2. Inspect all protective devices such as non-metallic control knobs, insulation materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
3. To be sure that no shock hazard exists, check for leakage current in the following manner.

- Plug the AC cord directly into a 220~240 volt AC outlet. (Do not use an isolation transformer for this test).
- Using two clip leads, connect a 1.5k ohm, 10 watt resistor paralleled by a 0.15 $\mu$ F capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduit or electrical ground connected to an earth ground.
  - A true RMS reading multimeter should be used for this test, especially where the equipment uses a switch mode power supply which may result in very non-sinusoidal leakage current.
  - Connect the resistor connection to all exposed metal parts having a return to the chassis (antenna, metal cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.

All checks must be repeated with the AC cord plug connection reversed. (If necessary, a nonpolarized adaptor plug must be used only for the purpose of completing these checks.)

Any reading of 1.05V peak (this corresponds to 0.7 mA. peak AC.) or more is excessive and indicates a potential shock hazard which must be corrected before returning the monitor to the owner.

### SAFETY NOTICE

Many electrical and mechanical parts in LCD television have special safety-related characteristics.

These characteristics are often not evident from visual inspection, nor can protection afforded by them be necessarily increased by using replacement components rated for higher voltage, wattage, etc.

Replacement parts which have these special safety characteristics are identified in this manual; electrical components having such features are identified by "⚠".

For continued protection, replacement parts must be identical to those used in the original circuit.

The use of a substitute replacement parts which do not have the same safety characteristics as the factory recommended replacement parts shown in this service manual, may create shock, fire or other hazards.

## PRECAUTIONS FOR USING LEAD-FREE SOLDER

### 1 Employing lead-free solder

"ALL PWB" of this model employs lead-free solder. The LF symbol indicates lead-free solder, and is attached on the PWBs and service manuals. The alphabetical character following LF shows the type of lead-free solder.

Example:

**LF**a

Sn-Ag-Cu

Indicates lead-free solder of tin, silver and copper.

In the case of LC-37GA8E, for the Inverter PWB Units the type used is nickel, so they are marked as LFn:

**LF**n

Sn-Ag-Ni

Indicates lead-free solder of tin, silver and nickel.

### 2 Using lead-free wire solder

When fixing the PWB soldered with the lead-free solder, apply lead-free wire solder. Repairing with conventional lead wire solder may cause damage or accident due to cracks.

As the melting point of lead-free solder (Sn-Ag-Cu) is higher than the lead wire solder by 40°C, we recommend you to use a dedicated soldering bit, if you are not familiar with how to obtain lead-free wire solder or soldering bit, contact our service station or service branch in your area.

### 3 Soldering

As the melting point of lead-free solder (Sn-Ag-Cu) is about 220°C which is higher than the conventional lead solder by 40°C, and as it has poor solder wettability, you may be apt to keep the soldering bit in contact with the PWB for extended period of time. However, Since the land may be peeled off or the maximum heat-resistance temperature of parts may be exceeded, remove the bit from the PWB as soon as you confirm the steady soldering condition.

Lead-free solder contains more tin, and the end of the soldering bit may be easily corroded. Make sure to turn on and off the power of the bit as required.

If a different type of solder stays on the tip of the soldering bit, it is alloyed with lead-free solder. Clean the bit after every use of it.

When the tip of the soldering bit is blackened during use, file it with steel wool or fine sandpaper.

Be careful when replacing parts with polarity indication on the PWB silk.

Lead-free wire solder for servicing.

• When no signal is input, the sound mode will display "MONO".

## Using external equipment

### Setting the input source

To view external source images, select the input source using  on the remote control unit or TV.

#### NOTE

- The cables marked with \* are commercially available items.

### Connecting a VCR

You can use the EXT 1 or 2 terminals when connecting a VCR and other audiovisual equipment.

If your VCR supports TV-VCR advanced AV Link systems, you can connect the VCR to the EXT 2 terminal of the TV using the fully-wired SCART cable.

#### NOTE

- TV-VCR advanced AV Link systems may not be compatible with some external sources.
- TV-OUT from EXT 1 is not outputted when EXT5 (HDMI) is selected as the input.

### Connecting a game console or camcorder

A game console, camcorder and some other audiovisual equipment are conveniently connected using the EXT 3 terminals.

#### NOTE

- EXT 3: The S-VIDEO terminal has priority over the VIDEO terminals.

### Connecting a DVD player

You can use the EXT 2, 3, 4 or 5 (HDMI) terminals when connecting to a DVD player and other audiovisual equipment.

#### NOTE

- EXT 3: The S-VIDEO terminal has priority over the VIDEO terminals.

When using an HDMI-DVI conversion adapter/cable, input the Audio signal here.

#### NOTE

- When connecting an HDMI-DVI conversion adapter/cable to the HDMI terminal, the image may not come in clearly.

## Using external equipment

### Connecting a decoder

You can use the EXT 1 terminal when connecting a decoder and other audiovisual equipment.

#### NOTE

- In cases when the decoder needs to receive signal from the TV, make sure to set "Decoder" to "EXT1" in the Programme Setup "Manual Adjust" menu. (See page 15.)
- Do not connect the decoder to the EXT 2 terminal.

### Connecting a PC

Use the EXT 4 terminals to connect a PC.

#### NOTE

- The cables marked with \* are commercially available items.
- The PC input terminals are DDC 1/2B-compatible.
- Refer to page 23 for a list of PC signals compatible with the TV.
- Macintosh adaptor may be required for use for some Macintosh computers.
- When connecting to a PC, the correct input signal type is automatically detected.

## Using AV Link function

This TV incorporates three typical AV Link functions for smooth connections between the TV and other audiovisual equipment.

### One Touch Play

While the TV is in standby mode, it automatically turns on and plays back the image from the audiovisual source (e.g. VCR, DVD).

### WYSIWYR (What You See is What You Record)

When the remote control unit of the connected VCR has the WYSIWYR button, you can automatically start recording by pressing the WYSIWYR button.

### Preset Download

Automatically transfers the channel preset information from the tuner on the TV to the one on the connected audiovisual equipment (e.g. VCR) via the EXT 2 terminal.

#### NOTE

- Refer to operation manuals of each external equipment for the details.
- Only works when the audiovisual equipment is connected to the EXT 2 terminal on the TV with AV Link via a fully wired SCART.
- The use of the AV Link function is only possible if the TV-set has enforced a complete auto-installation with the connected audiovisual equipment (page 7, Initial auto installation).
- The availability of the AV Link function depends on the audiovisual equipment used. Depending on the manufacturer and type of equipment used, it is possible that the described functions may be completely or partially unusable.

## Quick guide

### Attaching the stand

**Before performing work spread cushioning over the base area to lay the TV on, making sure the area is completely flat. This will prevent it from being damaged.**

Before attaching (or detaching) stand, unplug the AC cord from the AC INPUT terminal.

- 1 Confirm the 8 screws supplied with the TV.
- 2 Attach the two parts of the stand unit to each other using the 4 short screws as shown.

**Short screws (× 4)**  
(used in step 2)

- 3 Insert the stand into the opening on the bottom of the TV.
- 4 Insert and tighten the 4 long screws on the rear of the TV as shown.

#### NOTE

- To detach the stand, perform the above steps in reverse order.

### Setting the TV

### Setting the TV on the wall

- Installing the LCD Colour TV requires special skill that should only be performed by qualified service personnel. Customers should not attempt to do the work themselves. SHARP bears no responsibility for improper mounting or mounting that results in accident or injury.
- You can ask a qualified service personnel about using an optional bracket to mount the TV to the wall.

## SERVICE ADJUSTMENTS

The adjustment values are set to their optimum at the factory before shipping. If by any chance a value should become improper or a readjustment is required due to part replacement, make an adjustment according to the following procedure.

### 1 Entering and exiting the adjustment process mode

- 1- Unplug the AC power cord of TV set to force power off.
- 2- While holding down the "VOL (-)" and "INPUT" keys on the set at once, plug in the AC power cord to turn on the set. The letter K appears on the screen.
- 3- Next, hold down the "VOL (—)" and "P ( V )" keys on the set at once. Multiple lines of orange characters appearing on the screen indicate that the set is now in the adjustment process mode. If you fail to enter the adjustment process mode (the display is the same as normal start up), retry the procedure.
- 4- To exit the adjustment process mode after the adjustment is done, unplug the AC power cord to force off the power. (When the power is turned off with the remote controller, once unplug the AC power cord and plug it in again. In this case, wait 10 seconds plugging.)

**Caution: Use due care in handling the information described here lest the users should know how to enter the adjustment process mode. If the settings tampered with in this mode, unrecoverable system damage may result.**

1- Display the current adjustment status at point 6. (Page 9/11 of process adjustment)

The pattern for checking the adjustment status is toggled by pressing the "6" button on the remote control. (Normal OSD display -> "6" -> pattern for check (OSD disappears) -> "6" -> normal OSD display -> ...)

2- Read the value of the luminance meter.

3- Change M GAMMA R6/M GAMMA B6 (adjustment offset value) on page 9/11 of process adjustment so that the values of the luminance meter approach  $x = 0.272$  and  $y = 0.277$ .

(Basically, G is not changed. If adjustment fails only with R and B, then G should be reduced. In this case, the weaker of R and B must be fixed.)

4- If G is changed in step "3", change the values of M GAMMA G1 - M GAMMA G5 on pages 8/11 and 9/11 of process adjustment as follows. When not changed, go to step "5".

Offset value of M GAMMA G1 = (Offset value of M GAMMA G6)\*(160/960)

Offset value of M GAMMA G2 = (Offset value of M GAMMA G6)\*(320/960)

Offset value of M GAMMA G3 = (Offset value of M GAMMA G6)\*(480/960)

## 9. Lamp error detection

### 9.1. For 37" LCD TV

#### 9.1.1. Functional description

This LCD colour television has a function (lamp error detection) to be turned OFF automatically for safety when the lamp or lamp circuit is abnormal.

If the lamp or lamp circuit is abnormal, or some other errors happen, and the lamp error detection is executed, the following occur.

1- The main unit of television is turned OFF 5 seconds after it is turned ON. (The power LED on the front side of TV

turns from green to red.)

2 - If the situation "1" happens 5 times sequentially, television can not be turned ON. (The power LED remains red.)

#### 9.1.2. Countermeasures

When television is turned OFF by the lamp error detection mentioned above, it enters the adjustment process with the power LED red. Entering the adjustment process turns OFF the error detection and turns ON TV. This enables the operation check to detect errors in the lamp or lamp circuit.

Check whether "L ERROR RESET" on point 7, page 10/11 of the adjustment process is 1 or more. If it is 1 or more, it indicates the lamp error detection was executed. After confirming that the lamp or lamp circuit is normal, reset the lamp error counter pushing "OK" in the R/C. After resetting counter the label "\*\*\*\*OK\*\*\*\*" appears on Screen.

#### 9.1.3. Reset standby cause error list

After confirming that the lamp error counter has been erased, select "STAND BY CAUSE RESET" on point 3, page 10/11 of the adjustment process and select ON using the right cursor. For execute press "OK" in the R/C and the label "\*\*\*\*OK\*\*\*\*" appears on Screen.

### 9.2 For 32" LCD TV

#### 9.2.1. Functional description

This LCD colour television has a function (lamp error detection) to be turned OFF automatically (Inverter unit) for safety when the lamp or lamp circuit is abnormal.

If the lamp or lamp circuit is abnormal, or some other errors happen, and the lamp error detection is executed, the following occur. The Inverter circuit stops but the rest of TV continues working. The power led is green.

#### 9.2.2 Countermeasures

Proceed to repair the inverter unit to solve the problem that produces the lamp error.

#### 9.2.3. Reset standby cause error list

For 32" this is not necessary because the lamp error detection is not operative by software.

## SOFTWARE UPDATING

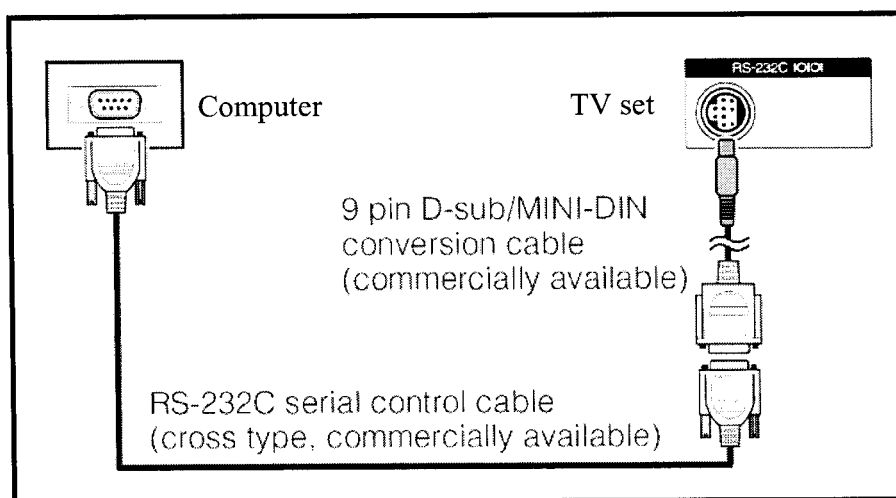

There are 3 methods to update software in the VCTp: I2C method, RS-232C HyperTerminal and RS-232C Tera Term method.

- RS-232C method is allowed when the TV is working properly and the action should be only software upgrade.
- I2C method is required when the VCTp flash is empty or corrupted (it means, any software inside IC running).

### 1. RS-232C Method Description (HyperTerminal).

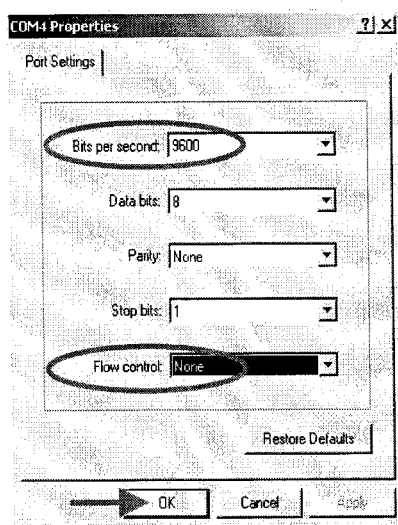

The hardware tools requirement are:

1. A Modem-null (Cross type) DB9 female to DB9 female cable.
2. An adaptor DB9 male to mini-Din 9 pin male cable (Sharp Code: QCNWGA015WJPZ)
3. Make the connections as indicated in the figure:

Before using RS-232C updating method is necessary to configure a Terminal PC software. HyperTerminal has been selected as a Terminal software because it's include in all Windows versions as an accessory, and you can find it inside "Accessories\Communications" folder. For this reason, please follow carefully the next steps:

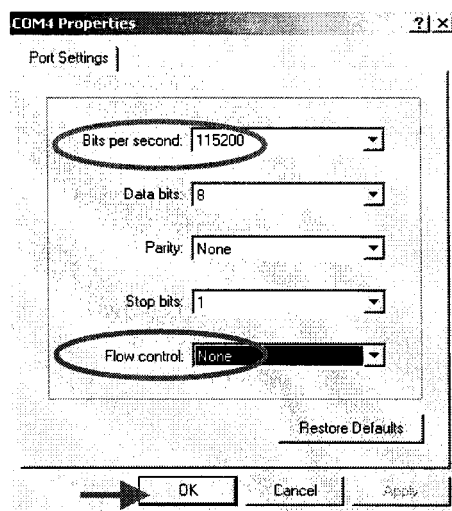

1. First time HyperTerminal is used, it's necessary to configure some settings. Follows next action to configure two connection: low speed (9600bps) and high speed (115200bps).
2. Create a New Connection file with name "P55\_9600bps".
3. Select a free COM port and select the Port Settings properties as follows:

4. Click on "File\Properties" menu for selecting the General and ASCII properties as follows:

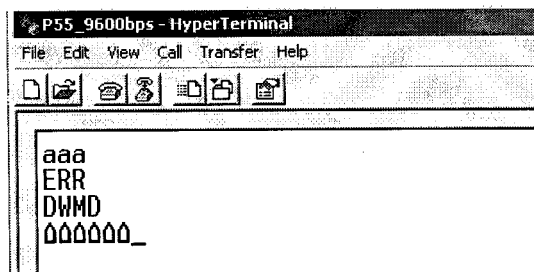

5. Select "New Connection" in the File Menu.
6. Answer "Yes" to close current connection and "Yes" to save session "P55\_9600bps".
7. Create a new connection with the name "P55\_115200bps".
8. Select a the same COM port used in item 2 and select the Port Settings properties as follows:

9. Select the same General and ASCII properties as item 3.
10. Close HyperTerminal session, answering "Yes" to close current connection and "Yes" to save session "P55\_115200bps".

To start updating session, click over "P55\_9600bps" icon that you can find in the "START\All programs\Accessories\Communications\HyperTerminal\HyperTerminal" folder and follow next procedure:

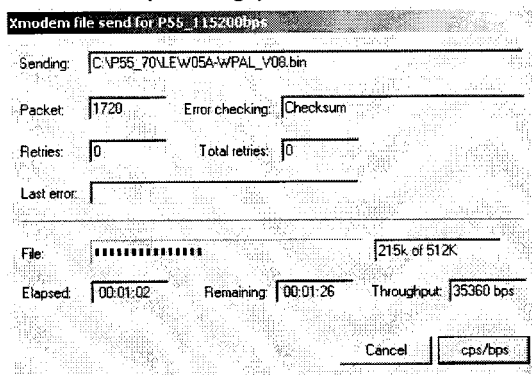

1. Check the connection between TV set and PC, sending a wrong command, as for example: "aaa". TV set returns an "ERR" label as an syntax ERROR (Not correct order or sequence).

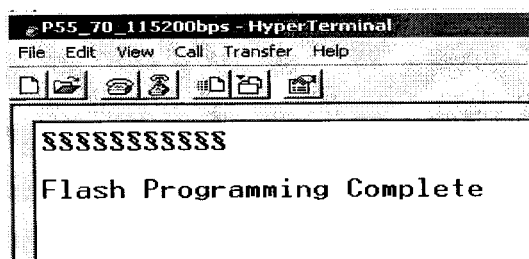

2. Send the command "DWMD" to enter TV set in Download Mode. The TV set answer sending same symbol continuously. If this symbol character doesn't appear, please don't worry and pass to next step.
3. Close this connection and open "P55\_115200bps" connection clicking over the "P55\_115200bps" that you can find in "START\All programs\Accessories\ Communications\HyperTerminal\HyperTerminal" folder.
4. Using "Transfer\Send file..." menu, select desired file (.bin format) and the transmission protocol (Xmodem) as show below.

5. After press "Send" button the updating process starts as follows:

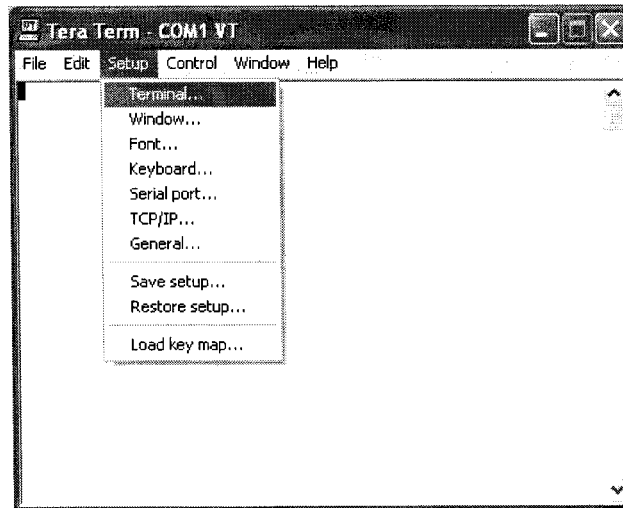

6. When flash update process finishes, the "Flash Programming Complete" label appears in the screen.

#### VERY IMPORTANT NOTE:

During the updating NOTE, please don't use the PC for other purposes, in order to abolish communication problems between TV set and PC. If TV set was not updated properly, the TV won't have the software to startup again, and you must follow the "I2C method" to update another time the TV set.

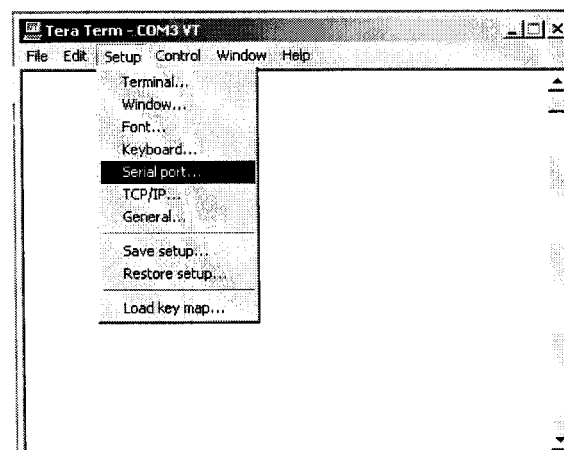

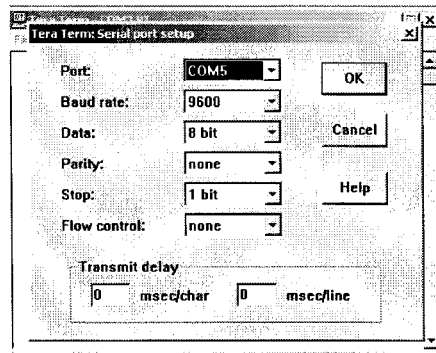

2. Select: **Terminal**

3. Choose the same options as the above picture.

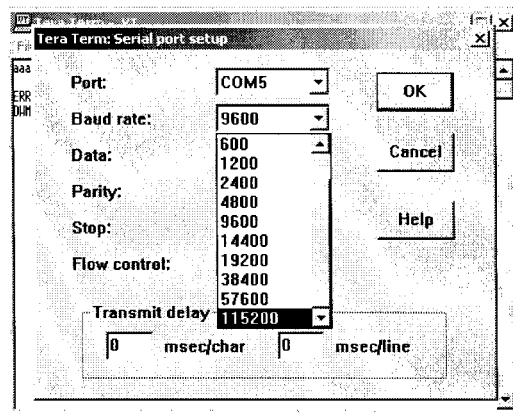

4. Select **Setup** ⇒ **Serial port** ⇒ **O.K.** Appear the follow screen:

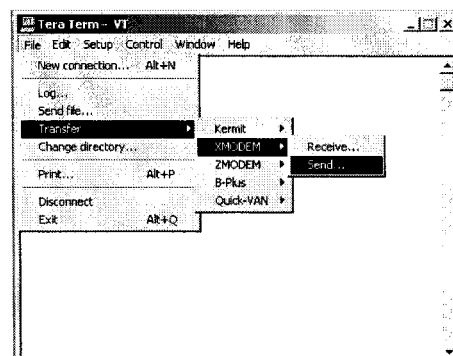

5. Select follows settings:  
Serial port to use: COM x  
Baud rate: 9600  
Data: 8 bits  
Parity: none  
Stop: 1 bit  
Flow control: none  
Enter O.K.

6. Check the connection between TV set and PC, sending a wrong command, as for example: "aaa". TV set returns an "err" label as an syntaxes ERROR (Not correct order or sequence).  
Send a "DWMD" (capital letters) command to enter TV set in Download Mode.  
Change a baud rate to 115200.  
Select: **Setup** ⇒ **Baud rate** ⇒ **115200** ⇒ **O.K.**

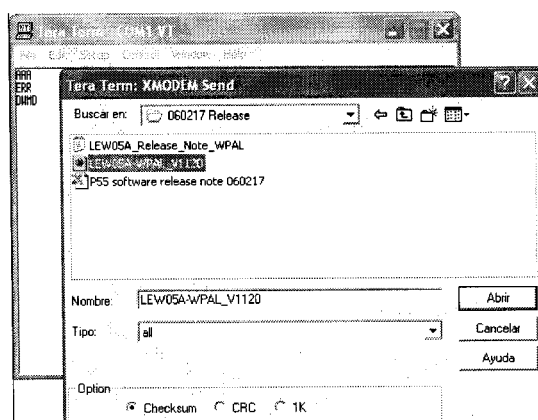

7. Select: **File** ⇒ **Transfer** ⇒ **XMODEM** ⇒ **Sent**

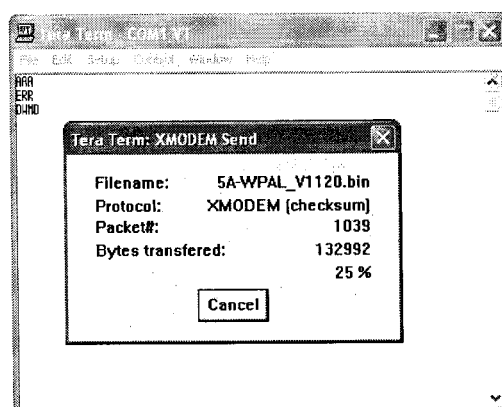

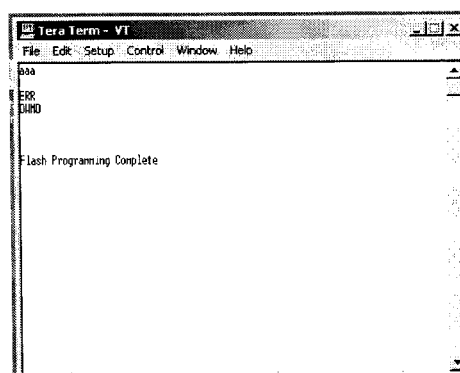

8. Choose the file for upgrade and click “Open”.

9. After select “Open” the upgrade process starts as follows:

10. When flash update process finishes, the "Flash programming complete" label appear in the screen, the device automatically go to switch off, and in a few seconds go to switch on again.

#### **VERY IMPORTANT NOTE:**

During the updating time, please **don't use** the PC for other purposes, in order to abolish communication problems between TV set and PC. If TV set was not updated properly, the TV won't have the software to startup again, and you must follow the "**I2C method**" to update another time the TV set.

### 3. I2C Method Description

The hardware tools requirement are:

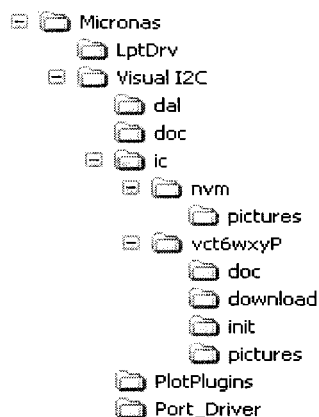

1. A Parallel port I2C interface with 20 pin to 3 pin cable (Sharp Code: CKIT-0004WJV0).
2. Make the connections as indicated below:
  - a. Connect Parallel port I2C interface to LPT port of the computer.
  - b. Connect the 20 to 3 pin cable from the I2C interface to the P2306 socket in the main board (XD603).

Before using I2C method is necessary to install Visual I2C software following next procedure.

1. Install Visual I2C release V3.2.3b from file ("Setup\_Visual\_I2C\_v3-2-3b8h.exe").
  - It's strongly recommended to accept the suggested default folder ("C:\Program Files\Micronas\Visual I2C").
2. Install Visual I2C VCTp extension from file ("Setup\_VI2C\_for\_VCT6wxyP\_v0111.exe").
  - It's interesting to change default folder to same as Visual I2C ("C:\Program Files\Micronas\Visual I2C").
  - During this installation process is possible to install also a complementary software to manage NVM memories . This installation is not needed, for this reason uncheck the option when the setup program ask to you. In case of installation it's interesting to change default folder to same as Visual I2C ("C:\Program Files\Micronas\Visual I2C").
3. Install Parallel driver depending of your Windows version from existing files inside the Visual I2C installation folder "C:\Program Files\Micronas\Visual I2C\Port\_Driver", following next criteria:
  - a. Windows 98/Me ("Setup\_LptDrv\_v0104\_9x.exe").
  - b. Windows NT ("Setup\_LptDrv\_v0104\_NT\_2000.exe").
  - c. Windows Xp/2000 ("Setup\_LptDrv\_v020201\_XP\_2000.exe").

After installing Visual I2C, the new generated file structure should look like this:

4. Check installation LPT driver using "C:\Program Files\Micronas\LptDrv\LptDrvTest.exe". After run this software, if LPT driver is installed properly must appear this screen:

```

C:\Archivos de programa\Micronas\LptDrv\LptDrvTest.exe

To run VCTp software update program, please click over "VCTP" icon from "START\All programs\Micronas\Visual I2C\ic\VCTP" and after Visual I2C finish their starting process click on "TVT" module. As additional method, it's possible to create a direct access to "C:\Program Files\Micronas\Visual I2C\ic\vct6wxyP\vctq\_tvt.vi2c" and launch it from Windows Desktop.

To start updating process follow next instructions:

1. Set Autoread in ON option.
2. Click on "GO" button.
3. Wait until "40" appears in Bootloader Version field.
4. Close DOS pop up windows pressing any key ("Press any key to continue...").
5. Click on the "Erase flash" button and wait for a seconds and set the AutoRead to OFF.
6. Check in the desired software version is selected in the "Load BinàFlash" option. If it's not the correct one, please double click on the file name and select it. The first time this software is use it's necessary to confirm write Addressing margin as from 0x0 to 0x7fff.

7. Click on the “Load Bin → Flash” to start updating process.

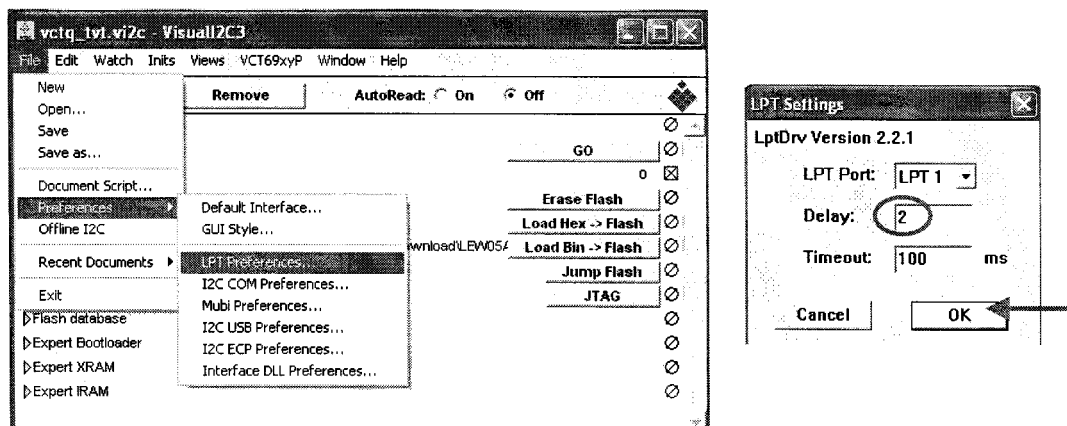

8. When the updating process finishes, the “Progress” pop up window automatically closes. If appears some problem during the updating process a error label appears in the filename information line.

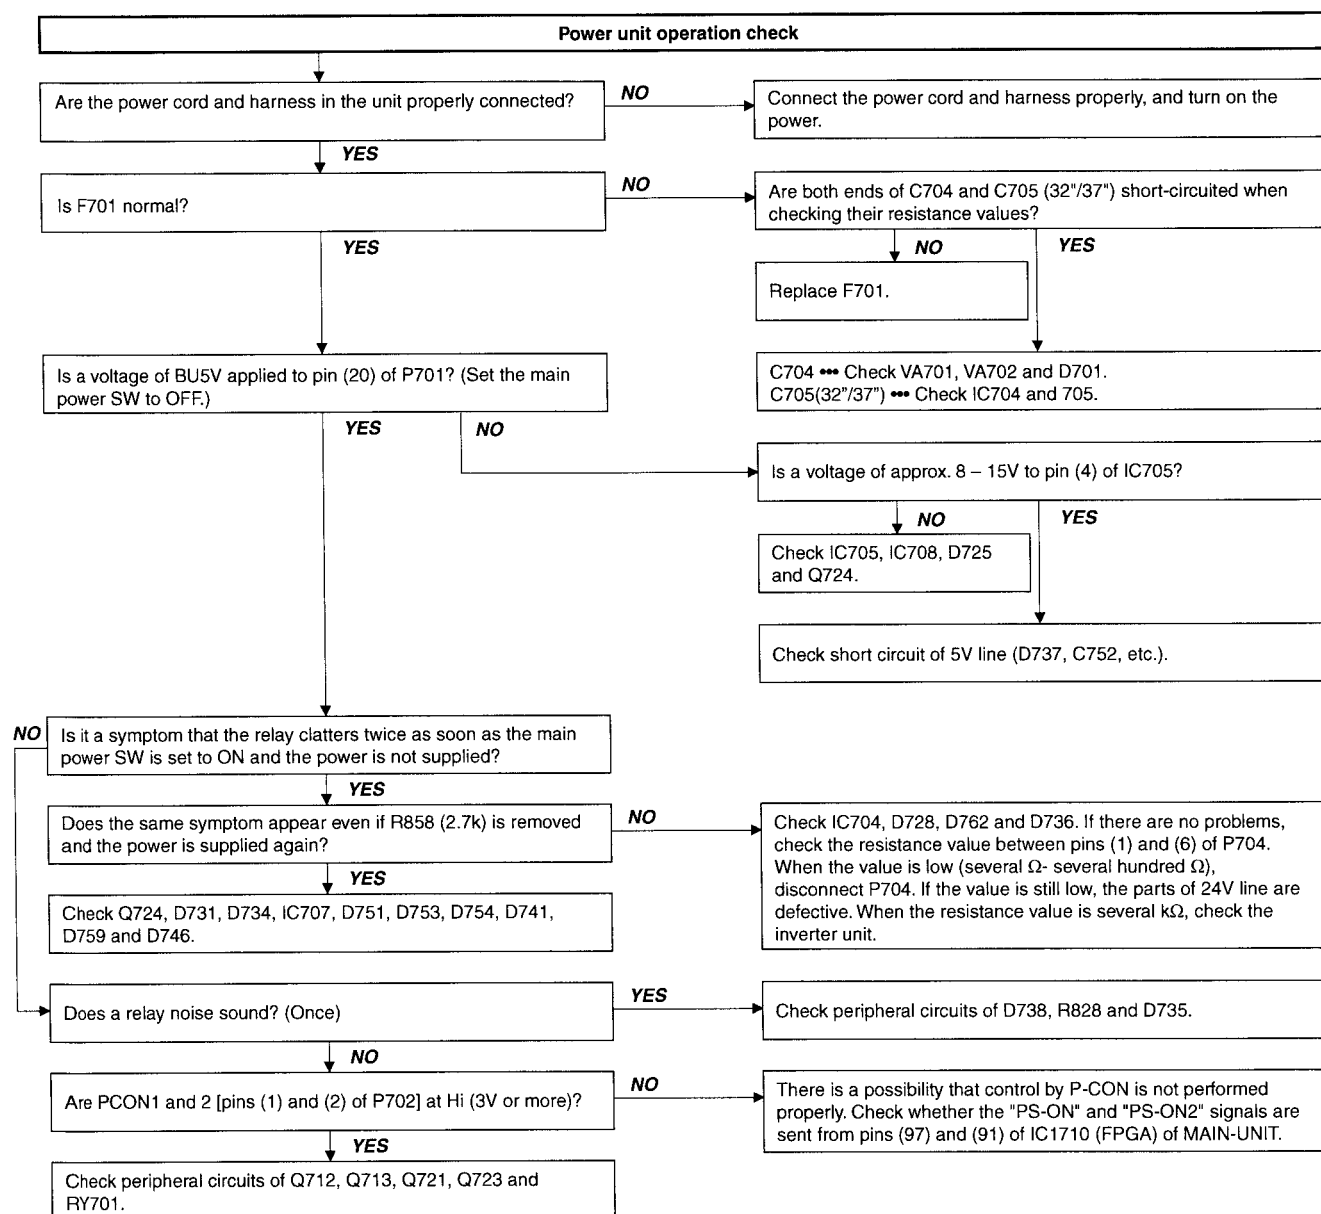

If the TV has problem to enters in the “Bootloader mode”, it’s possible to force it by hardware method. This alternative method is described below:

- 1.Switch off TV set or hold VCTp RESET line to GND.
- 2.Pull down SCL line (pin 1) to GND (pin 3) in P2306 connector.
- 3.Switch on TV set or release VCTp RESET line.
- 4.Release SCL pull down after minimum of 2 seconds.
- 5.Check if VCTp is in bootloader mode with Autoread setting in ON.
- 6.Wait until “40” appears in Bootloader Version field.
- 7.Follow instruction from item 5 on software method.

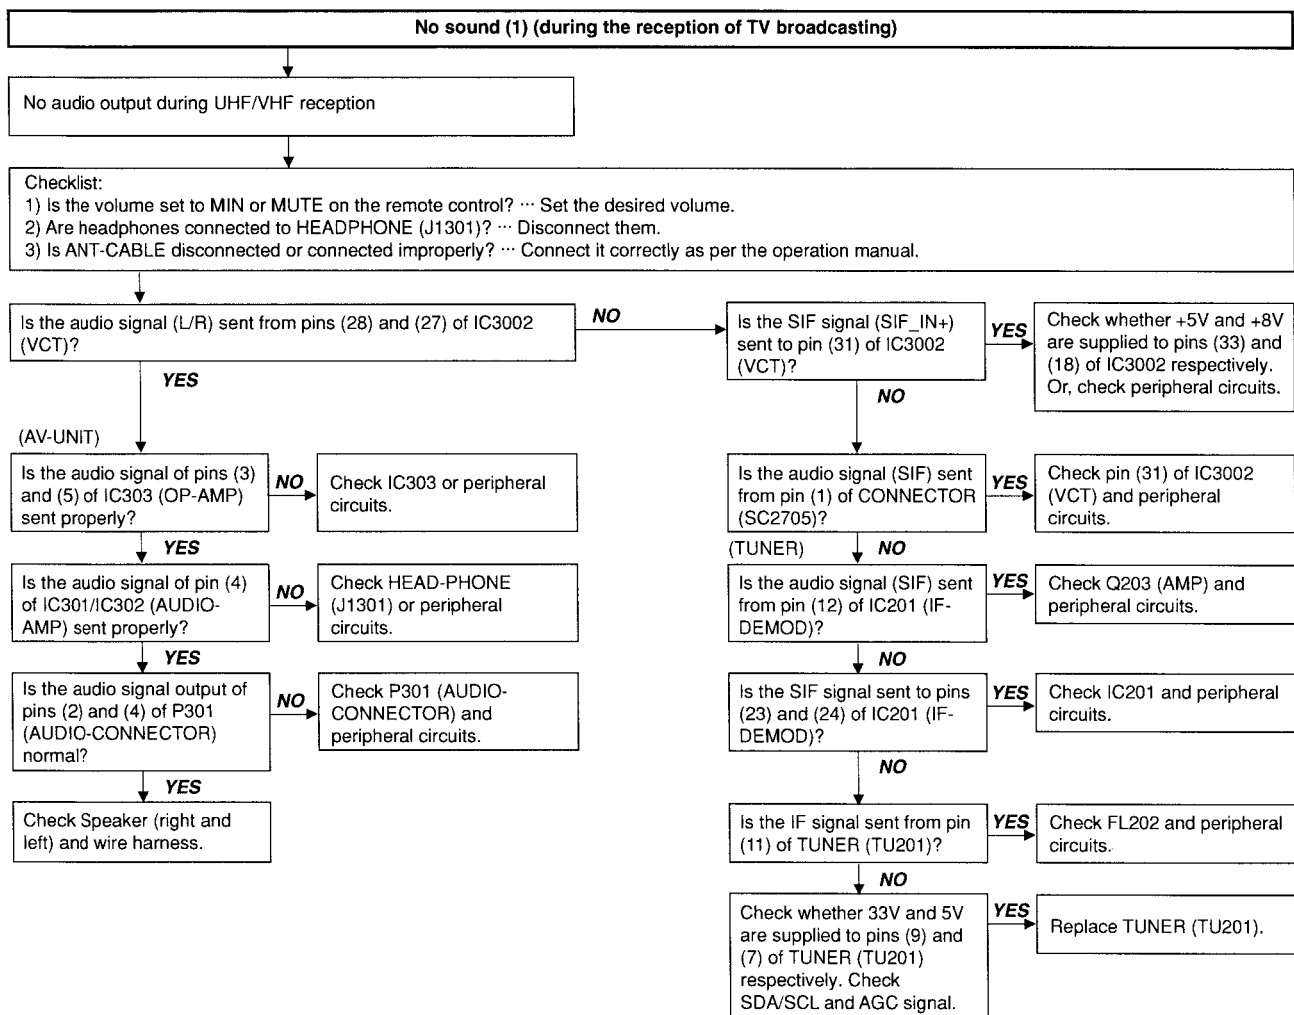

Sometimes, depending on the PC hardware, the progress bar runs very fast (Normal time: 1 minute) or some error message appears in the filename information line. This means it’s necessary to modify some parameter of LPT port, for this reason select “LPT Preferences” on the “File\Preferences...” menu and increase Delay from “0” to “1” or “2” (normally, these values are the best choice).

SCHEMATIC DIAGRAMS

Description:

VOLTAGE MEASUREMENT CONDITION:

1. The voltages at test points are measured on exclusive AC adaptor and the stable supply voltage of AC 230V. Signals are fed by a color bar signal generator for servicing purpose and the above voltages are measured with a 20k ohm/V tester.

INDICATION OF RESISTOR & CAPACITOR:

RESISTOR

1. The unit of resistance “Ω” is omitted. (K=kΩ=1000 Ω, M=MΩ).  
2. All resistors are ± 5%, unless otherwise noted. (J= ± 5%, F= ± 1%, D= ± 0.5%)  
3. All resistors are 1/16W, unless otherwise noted.  
4. All resistors are Carbon type, unless otherwise noted.
